BSIT 2-1 Midterm Seatwork #3 - Student Age Analyzer

StudentAgeAnalyzerAstibe.java

```
package seatwork3;
import java.util.Scanner;

public class StudentAgeAnalyzerAstibe {
    // My user-defined method
    public static String analyzeAge (int age){
        String category;
        if (age >= 0 && age <= 12){
            category = "Child";
        } else if (age >= 13 && age <= 19){
            category = "Teenager";
        } else if (age >= 20 && age <= 59){
            category = "Adult";
        } else if (age >= 60){
            category = "Senior Citizen";
        } else {    // for negative inputs
            category = "Invalid. Please input only positive integers.";
        }
        return category;
    }
    // My main method
    public static void main(String[] args){
        Scanner input = new Scanner (System.in);

        System.out.print ("Enter Student Name: ");
        String studName = input.nextLine();
        System.out.print(" Enter Student Age: ");
        int studAge = input.nextInt();
```

```
        String ageCategory = analyzeAge (studAge);
        // Store the returned value in ageCategory

        System.out.println ("\n===== STUDENT AGE ANALYZER =====");
        System.out.println ("Name : " + studName);
        System.out.println ("Age : " + studAge);
        System.out.println ("Categorized As : " + ageCategory);

        input.close ();  // to avoid memory leaks
    }
}
```
